Let's Start!

How to Make Repetition Easier in JavaScript

Learning Outcome:

Understand information about web applications, their principles and basic concepts in a range of work contexts. Describe applications for an operating system for personal computers in a range of work contexts.

Can Do Statements:

- I can use while loop statements in JavaScript.
- I can talk about the purpose of a while loop script.
- I can identify the syntax of while loop statements in JavaScript.

Ask your partner:

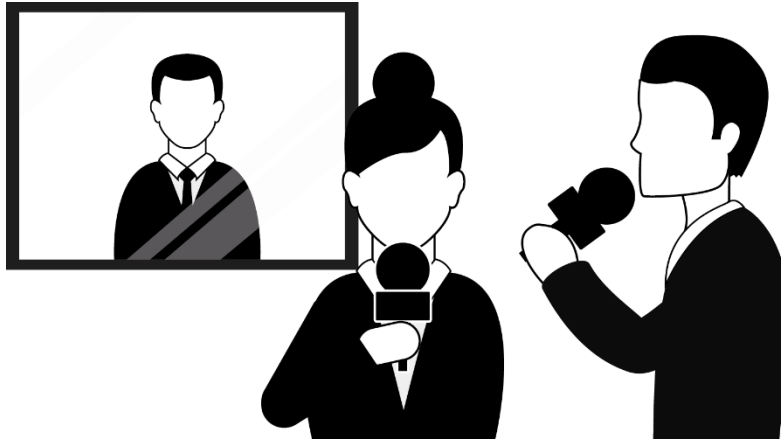

- What are the advantages of JavaScript compared to other programming languages?
- Why has JavaScript become so popular among programmers?

Let's Explore!

Luke and Ivette talk about "While Loop" in their radio program.

Instructions: Read the text below.

- Luke:** Since programming can be too demanding, sometimes, you may need to use strategic statements to reduce the work.
- Ivette:** I've done programming but I quitted because at a point it got really tiring to work over something endlessly.
- Luke:** I know what you mean. For instance, there will be times where you need to perform actions over and over again. For such task, loops really ease down the burden of writing the same multiple times.
- Ivette:** Maybe you could tell us more about those loops.
- Luke:** Sure, there are multiple types of loops in JavaScript, the first two are the most common and are alike. The first one, the `"while"` loop, is used to execute a statement or code block repeatedly as long as the expression is true. Once it becomes false, the loop finishes and moves to another command.
- Ivette:** And what about the syntax in this loop?
- Luke:** Do not forget to use the `"while"` keyword and do not omit the breaks. It's more boring to check twice before launching, but it's also more difficult to find a misspelled code once it's been finished.
- Ivette:** You're right! You may feel more satisfied by being extra careful when writing in JavaScript. But let's continue to another loop statement.
- Luke:** The second, the `"do...while"` loop is similar to the `"while"` loop but in this case the command is executed at least once no matter if the condition is true or false. For this, do not forget to use a semicolon at the end of the loop. And please, do not confuse these loops, they are alike, as I said, but in programming they can make a mess if they are not used properly.
- Ivette:** I'm sure people might be interested in more advice so, let's go to a break before we continue. Stay tuned.

Let's Practice!

Using While Loop

Instructions: Proofread the sentences. Correct the mistakes.

1. Sometimes you needs to perform actions over and over again.
2. Loops helping to ease down the burden of writing the same multiple times.
3. JavaScript have multiple types of loops.
4. The while loop execute a statement as long as the expression is true.
5. The loop finishing and moves to another command if it becomes false.

Let's Practice!

Talking About Syntax...

Instructions: Select the correct answer.

1. Do not forget that you need to use _____ when working with loops.
Hint: to work with loops.
 - a. the JavaScript keyboard
 - b. the while keyboard
 - c. the break keyboard
 - d. the codes keyboard
2. Do not forget to include _____, otherwise it won't work.
Hint: punctuation is important.
 - a. the keyboard
 - b. the JavaScript
 - c. the breaks
 - d. the program
3. Do not _____ any code, it will be difficult to correct later.
Hint: Make sure it is written correctly.
 - a. misspell
 - b. write
 - c. include
 - d. spell
4. Do not forget that _____ can become true or false.
Hint: Similar to circumstance
 - a. codes
 - b. JavaScript
 - c. conditions
 - d. scripts
5. Do not miss the _____ at the end of the do... while loop.
Hint: A punctuation sign formed by two signs.
 - a. semicolon
 - b. comma
 - c. period
 - d. code

Extension Activity

Working with While Loops in JavaScript!

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Search for more information about while loops in JavaScript.
- Create a poster where you include features from the while loops.
- On a separate poster include features from the do-while loops.
- Share your work with the class.

Self-Assessment

Yes**No**

- I use while loops in JavaScript.
- I identify the syntax of the while loops.
- I understand the purposes of the loops.
- I share my work with the class.

☐	☐
☐	☐
☐	☐
☐	☐

Target Words

- **demanding** (adjective): that requires a lot of effort
e.g. Since programming can be too demanding sometimes, you may need to use strategic statements to reduce the work.
- **endlessly** (adverb): that happens in a continuous way without stopping
e.g. I've done programming but I quitted because at a point it got really tiring to work over something endlessly.
- **ease down** (verb): to make something easier or reduce the complexity and therefore, the effort needed
e.g. For such task, loops really ease down the burden of writing the same multiple times.
- **alike** (adjective): very similar in characteristics
e.g. There are multiple types of loops in JavaScript, the first two are the most common and are alike.
- **misspelled** (adjective): something written incorrectly
e.g. It's more boring to check twice before launching, but it's also more difficult to find a misspelled code once it's been finished.
- **mess** (noun): disorder, dirtiness, disorganization
e.g. And please, do not confuse these loops, they are alike, as I said, but in programming they can make a mess if they are not used properly.

Learning Points

Negative Imperatives

Imperatives are used to give orders, make suggestions or invite someone to do something in a friendly way.

We may have heard or used imperatives many times without realizing what they are. We can use them for different purposes and its grammatical structure is very simple.

They use the base form of the verb at the beginning of the sentence without a subject. They are not conjugated in any tense. If you need to make a negative imperative, you only need to add the auxiliary verb "**do**" with the particle "**not**" contracted or not at the beginning of the sentence. Let's check the structure:

Do + not + base form of verb + complement

Examples

- *Do not forget to use the "while" keyword.*
- *Do not confuse these loops.*
- *Do not omit the breaks.*

Adjectives Ending in -Ed and -Ing

Verbs can become **adjectives** by adding **-ed** or **-ing**

It is possible to turn a verb into an adjective with the use of those suffixes. Because they are adjectives, they are used along with the verb to be but be careful because meaning changes. Let's take a look at some examples:

I'm sure people might be **interested** in more advice.
In the example, people feel in a certain way: "interested"
It's more **boring** to check twice before launching.

In this example, something has the characteristic of "boring"

When you use a **-ing adjective**, it means that the subject has the characteristic. When you use the **-ed adjective**, it means that the subject feels in a certain manner.

Examples

- *Since programming can be too demanding sometimes*
- *I quitted because at a point it got really tiring to work over something endlessly*
- *You may feel more satisfied by being extra careful when writing in JavaScript.*
