Let's Start!

A For Loop in JavaScript

Learning Outcome:

Understand information about web applications, their principles and basic concepts in a range of work contexts. Describe applications for an operating system for personal computers in a range of work contexts.

Can Do Statements:

- I can say what the "for loop" is in JavaScript.
- I can talk about the elements that compose a "for loop" in JavaScript.
- I can identify the syntax to use in a "for loop" in JavaScript.

Ask your partner:

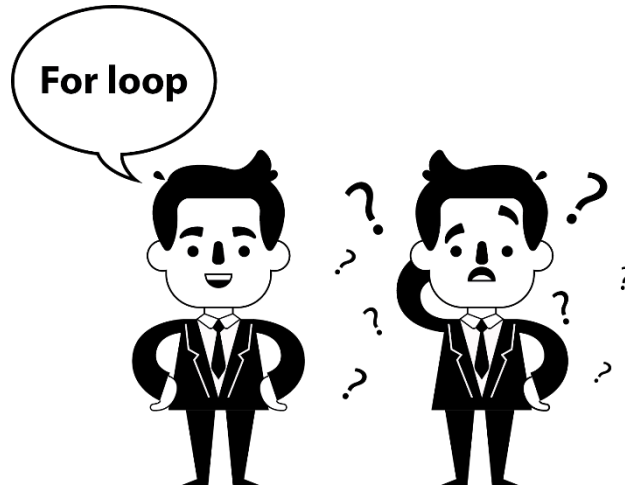

- Do you know what a for loop is? Can you think of an example?
- What do you think is the problem with for loops in programming?

Let's Explore!

Josh is a student who is having problems with For Loop in java script.

Instructions: Read the text below.

Josh: Ugh! I have been studying the For Loop in Java script since yesterday, but I don't really get it! I must be pretty dumb.

Drake: Don't be so harsh on yourself! It's not that hard. I've been working with Java script for a while now. Let me explain to you the easiest way.

Josh: Ok, thanks.

Drake: You know what looping is, right? Well, For Loop is the most compact form of looping. It only has 3 parts.

Josh: How can a looping form only have three parts?!

Drake: Yes. It has been the most useful and practical tool. Besides, you know that the longer the code, the easier for bugs and glitches to appear. The first part of the For Loop is the loop initialization. A counter with a starting value is initialized.

Josh: And this happens before the loop begins, right?

Drake: Exactly! The second step is the test statement. It is called test because that's what it does; it tests or evaluates whether a given condition is true or not. If the statement is true, the code inside the loop will be executed. If it is false, the control will come out of the loop.

Josh: Oh, I get it now! I have had problems with that step, because I got confused with the true or false statement.

Drake: Yeah, when you start learning about Java script, the loop concept is hard to grasp. Anyways, the last step is the iteration statement; this is the easiest one, you use it to increase or decrease the counter value.

Josh: Thanks! You have helped me a lot! Just one more question, how do you identify the syntax used in a For Loop?

Drake: When you have been into programming for so long, as I have, you learn that all the three parts can be put in a single line separated by semicolons.

Let's Practice!

I know you can study harder!

Instructions: Select the correct option to correctly complete each sentence.

I can find the (easiest / easier / easy) way to explain you about looping. You must know that the For loop is the (compact / most compact / more compact) and (the simplest / most simplest / simple) form of looping. One of the most interesting facts about For loop, is that it only has 3 parts.

Let's Practice!

Don't worry, I'll give you some useful information.

Instructions: Proofread the sentences. Correct the mistakes.

Josh: I've been study the For Loop in JavaScript for hours, but I haven't Understand anything yet.
You told me You've been worked with JavaScript for a while.
Right? Have you working with the For loop?

Drake: Right. Let me explain. The For loop has being the most compact form of looping since it first appear in 1999.
It has being simplified to only three parts to make the shortest and most useful loop ever.

Extension Activity

Let's share some experiences!

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Search for information about For loop in JavaScript.
- Identify details such as its purpose, its elements, etc.
- Write down a short text including information about experiences you have had with JavaScript and For loop.
- Share your short text in class and discuss about the topic.

Self-Assessment

Yes

No

- I search for information about For loop in JavaScript. ☐ Yes ☐ No
- I identify details such as its purpose, its elements, etc. ☐ Yes ☐ No
- I give information about experiences I have had with JavaScript and For loop. ☐ Yes ☐ No
- I share information about JavaScript and For loop and discuss about it. ☐ Yes ☐ No

Target Words

- **dumb** (adjective): To be silly, clumsy or stupid.
e.g. I don't really get it! I must be pretty dumb.
- **Don't be so harsh on yourself** (expression): When a person thinks badly and negatively about himself / herself.
e.g. Don't be so harsh on yourself! It's not that hard!
- **For a while** (expression): an action that has been happening for a considerable amount of time.
e.g. I've been working with Java script for a while now.
- **get confused** (verb): to be confused because of something or someone
e.g. I got confused with the true or false statement.
- **Hard to grasp** (expression): difficult to understand
e.g. When you start learning about Java script, it's a concept hard to grasp.
- **Be into** (verb): when you like something and you have spent time learning about it.
e.g. When you have been into programming for so long, as I have.

Learning Points

Present Perfect Simple vs Present Perfect Continuous

We use **Present Perfect Simple** and **Present Perfect Continuous** to talk about actions that started in the past but are still happening or can happen again.

We use **Present perfect** to talk about actions or experiences that started in the past but are still relevant in the present, we do not focus on the duration of the action

Structure

Subject + have / has + verb in past participle + complement

Examples

I have travelled to Canada twice

Have you ever seen star wars?

She hasn't worked in two years, she is focused in taking care of her baby

We use **present perfect continuous** for actions that started in the past but are still happening at the moment and we want to make a focus in the duration of the action

We use the following structure

Subject + have / has been + verb-ing + complement

Examples

I have been working in this company ally life

She hasn't been studying Japanese for 5 years, only 3.

Have you been sleeping well lately?

Examples

- *I have been studying the For Loop in Java script since yesterday, but I don't really get it!*
- *when you have been into programming for so long as me, you learn that all the tree parts can be put in a single line*
- *I've been working with Java script for a while now*
- *it has been the most useful and practical*
- *I have had problems with that step, because I got confused with the true or false statement.*
- *Thanks! You have helped me a lot!*
