Let's Start!

Understanding the Importance of JavaScript

Learning Outcome:

Understand information about web applications, their principles and basic concepts in a range of work contexts. Describe applications for an operating system for personal computers in a range of work contexts.

Ask your partner:

- What do you think would happen if JavaScript stopped working all of a sudden?
- How do you think JavaScript could be updated or improved?

Can Do Statements:

- I can understand written information about the importance of JavaScript.
- I can identify important vocabulary about Javascript.
- I can write a paragraph about the importance and use of Javascript in my organization.

Let's Explore!

Listen to the following report about the use of JavaScript.

Instructions: Read the text below.

JavaScript is a programming language that uses a variety of symbols which follow a set of rules to perform operations. Syntax in programming language is something that should be taken seriously as well as the different operators that may require lots of practice. Within the overwhelming world of programming, there is a bunch of things to be taken into account and to pay attention to before successfully executing your first JavaScript commands. Let's begin by taking a look at the importance of JavaScript.

JavaScript was created to make programmers' lives easier. One of the most notable advantages JavaScript has over other languages is that it can be interpreted or read by all browsers which makes it a universal programming language. Besides, its practicality and flexibility should be highlighted as, on the one hand, it isn't a very complex language for people to learn since it works perfectly for those who are starting up; and on the other hand, it is a programming language that could be used to work with a variety of functions. This widespread tool was so well built that it has been increasing its range of acceptance, and thus, popularity among users in the past years. Moreover, contrary to popular belief that software should be constantly updated, JavaScript hasn't needed major changes as times passes by.

JavaScript was adopted in our company 5 years ago and since then, it became a "must" for programming. We are a web design company that was recently named as one of the top 4 companies in the state. From our standpoint, we used to be skeptical about JavaScript since web-based applications were considered an issue in language programming and we thought JavaScript was not going to be any better than the other languages. We now think it is the best suited technology for us and we are now quite aware of its advantages: Different frameworks can be used from front to back ends; JavaScript was chosen by huge enterprises as their trustworthy language programming for software development; and JavaScript reduces the costs in training and hiring staff. Overall, its importance relies on all the advantages and user-friendly features it offers.

**Let's Practice!**

Why is JavaScript so important?

Instructions: Circle the correct option to complete the text.

The importance of JavaScript (was shown / were shown / shown) as soon as programmers' lives became easier. Since JavaScript (were introduced / introduced / was introduced), it became one of the most important tools for software development. These tools (considered / were considered / was considered) easy to startup and use, therefore JavaScript (was accepted / were accepted / accepted) by the programming community very well. Besides, JavaScript doesn't require a constant update since most of the tools (was improved / were improve / were improved) at a very early stage.

**Let's Practice!**

Important Concepts of JavaScript

Instructions: Use the word(s) from the box to correctly complete the sentence.

should be taken / should be considered as / be
added to all / should be attributed / be remarked

1. Execution of dynamic content _____ a strength of JavaScript.
2. JavaScript _____ as a stand-alone programming language.
3. JavaScript _____ web browsers due to its success.
4. Interactivity and user friendliness should _____ as two important characteristics of JavaScript.
5. An easy Navigation in a website _____ to JavaScript.

Extension Activity

The Importance of JavaScript.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Search for information related to the importance of JavaScript.
- Write a list of the benefits that JavaScript has brought to modern technology.
- Prepare a presentation about these benefits.
- Share your work with the class.

Self-Assessment

- | | Yes | No |
|---|-----------------------|-----------------------|
| 1. I understand the importance of JavaScript. | ☐ | ☐ |
| 2. I read information about JavaScript. | ☐ | ☐ |
| 3. I write about the relevance of JavaScript. | ☐ | ☐ |
| 4. I share my work with the class. | ☐ | ☐ |

Target Words

- **overwhelming** (adjective): something that causes stress or that feels uncontrollable
e.g. Within the overwhelming world of programming, there is a bunch of things to be taken into account before successfully executing your first JavaScript commands.
- **best suited** (adjective): something with the characteristic of fitting perfectly
e.g. We now think it is the best suited technology for us and we are now quite aware of its advantages.
- **widespread** (adjective): something that has been shared or commented widely
e.g. This widespread tool was so well built that it has been increasing its range of acceptance, and thus, popularity among users in the past years.
- **a "must"** (expression): something considered highly necessary or mandatory to do or have
e.g. JavaScript is a "must" for programmers.
- **standpoint** (noun): one's personal opinion or viewpoint
e.g. From our standpoint, we used to be skeptical about JavaScript since web-based applications were considered an issue in language programming and we thought JavaScript was not going to be any better than the other languages.
- **user-friendly** (adjective): something users can easily use
e.g. Overall, its importance relies on all the advantages and user-friendly features it offers.

Learning Points

Simple Past Passive

Remember the **passive** voice focuses on the thing or person that receives the action rather than on the agent that performs it.

Simple past passive highlights the thing or person that received an action in the past. If the agent that performed the action is not important, it is possible to omit it. Let's check the following example:

I'm sure technology **was implemented** to improve people's quality of life.

The highlight is on "technology" and its implementation, not in whoever implemented it.

The passive voice follows this structure:

Thing or person that receives the action + **was / were** + **past participle** + complement

Example:

*JavaScript **was adopted** by many companies.*

Remember that you can indicate the agent that performed the action by introducing it with the preposition 'by' as shown in the previous example.

Examples

- *JavaScript was created to make programmers' lives easier.*
- *This widespread tool was so well built that it has been increasing its range of acceptance.*
- *JavaScript was adopted in our company 5 years ago and since then, it became a "must" for programming.*

Learning Points

Passive Voice of Modal Verbs, Should, in Affirmative Form

The passive voice focuses on the thing or person that receives the action rather than on the agent that performs it.

We can use passive voice with modal verbs to show obligation or possibility while emphasizing on the thing or person that is receiving the action. The passive voice follows this structure:

Thing or person that receives the action + **modal verb** + **be** + **past participle** + complement

Examples:

The advantages of JavaScript **must be taken into account** when determining what programming language to use.

JavaScript **should be implemented** in our company

Examples

- *How syntax and operators in programming language work is something that **should be studied** before starting to write any code.*
- *Contrary to popular belief that software **should be** constantly **updated**...*
- *Syntax in programming language is something that **should be taken** seriously...*
