Let's Start!

The history of JavaScript

Learning Outcome:

Understand information about web applications, their principles and basic concepts in a range of work contexts. Describe applications for an operating system for personal computers in a range of work contexts.

Can Do Statements:

- I can understand written information about the history of JavaScript.
- I can use relevant terms to describe JavaScript.
- I can write a timeline with information about the history of JavaScript.

Ask your partner:

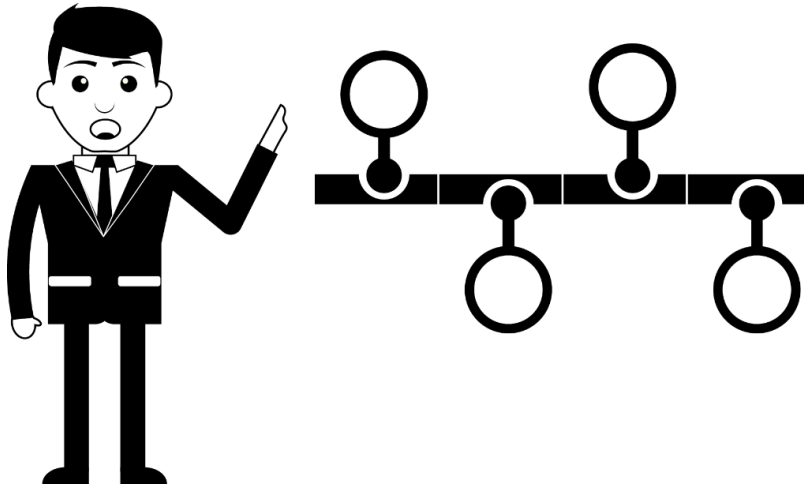

- What do you know about the history of JavaScript?
- Would web applications development be possible without JavaScript?

Let's Explore!

This is a brief summary of JavaScript History

Instructions: Read the text below.

The History of JavaScript is long and interesting. Do not confuse Java with JavaScript. JavaScript was created in 10 days by Brendan Eich. It was not always known by the name JavaScript. Its original name was Mocha. Then, in September of 1995, it was changed to LiveScript. Later, in the same year, it was decided to call it JavaScript. This strategy was successful because in that moment, Java was considered very popular.

Between 1996 and 1997, JavaScript was taken to the European Computer Manufacturers Association, ECMA for short. Standard specifications were made so other browsers could start to use them. This program was never designed to be perfect since the start, so in collaboration with the ECMA, there were new programs released: ECMAScript 2 in 1998 and ECMAScript 3 in 1999, which is the baseline for the current JavaScript.

Microsoft did not want to implement JavaScript in Internet Explorer, but in 2003, they gave up and accepted it.

2005 was a very important year for programming languages. Brendan Eich, JavaScript creator, and Mozilla rejoined ECMA and worked in new programming language.

Macromedia and Adobe did the same. But, in 2007 and 2008, they realized that their projects were very different from JavaScript, and so they could not be converged.

Back in 2005, Jesse James Garret established described different technologies, but JavaScript was the backbone of all. JavaScript allowed the creation of dynamic web applications.

The different parties involving programming languages met in Oslo in 2008, they came to an agreement, and the previously ECMAScript 5 was improved and called ECMAScript 5.

This is as far, the history of JavaScript, but there are many improvements that can be done, and it's going to be even better.

Let's Practice!

Facts About JavaScript

Instructions: Match column A with Column B.

COLUMN A

1. JavaScript was taken to
2. JavaScript was created in 10 days
3. Standard specifications were made
4. JavaScript was known
5. The name LiveScript was changed

COLUMN B

- a. by Brendan Eich.
- b. as Mocha.
- c. to JavaScript in 1995.
- d. ECMA between 1996 and 1997.
- e. for different browsers to use JavaScript.

Let's Practice!

Reviewing Important Dates for JavaScript

Instructions: Organize the mystery sentence.

1. JavaScript / in / 1995. / appeared

2. JavaScript / ECMA / in / received / 1996.

3. The / standard / in / official / appeared / ECMAScript 2 / 1998.

4. official / in / ECMAScript 3 / The / standard / 1999. / appeared

5. Mozilla / and / Ecma / Eich / 2005. / Brendan / in / rejoined

Extension Activity

History of JavaScript.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Search for more information about the history of JavaScript.
- Create a timeline with the most relevant events of JavaScript.
- Prepare a presentation where you mention all the important events and the dates.
- Share your work with the class.

Self-Assessment

Yes

No

- I identify important terms for JavaScript.
- I create a timeline with the history of JavaScript.
- I recognize important facts and events for JavaScript.
- I share my work with the class.

☐	☐
☐	☐
☐	☐
☐	☐

Target Words

- **converge** (verb): to join or congregate two or more elements
e.g. Their projects were very different from JavaScript, and so they could not be converged.
- **backbone** (noun): The biggest support or pillar of something
e.g. Jesse James Garret stablished described different technologies, but JavaScript was the backbone of all.
- **party** (noun): a group that shares a goal or view e.g. Political party.
e.g. The different parties involving programming languages met in Oslo in 2008.
- **baseline** (noun): the starting point for a project
e.g. ECMAScript 3 in 1999, which is the baseline for the current JavaScript.
- **design** (verb): to plan an event, object or project
e.g. This program was never designed to be perfect since the start.
- **rejoin** (verb): when someone leaves a group and then joins it once again
e.g. Brendan Eich, JavaScript creator, and Mozilla rejoined ECMA and worked in new programming language.

Learning Points

Simple Past Statements - Review

You can use **past simple** to talk about actions that started and finished in the past.

We use past simple for actions that happened and finished in the past
Structure:

Subject + verb in past + complement

Example

I **washed** the car last weekend

The company **lost** many potential customers

Examples

- *Microsoft did not want to implement JavaScript in Internet Explorer, but in 2003, they gave up and accepted it.*
- *Jesse James Garret stablished described different technologies, but JavaScript was the backbone of all. JavaScript allowed the creation of dynamic web applications.*

Simple Past Passive Voice with Frequency Adverbs

We use **simple past in passive voice** to talk about actions that happened in the past but we focus on the event and not in the person who did the action.

Passive voice is used to focus on the action rather on the person or subject that does the action.

We can add an adverb of frequency to make an special focus to the action.

It follows this structure:

Object + was/were + adverb of frequency + Past participle of the verb + complement

Examples:

*I **was** never **given** a bad treat in my travel to Japan*

*English **was** always **implemented** in the Colombia School curriculums.*

As you can see, the people behind the actions, Japanese people in the first example and politicians and teachers in the second, are not important, the focus is in the object of the action.

Examples

- *It was not always known by the name JavaScript. Its original name was Mocha*
- *This program was never designed to be perfect since the start*
